Base Bamboo Fiber

Panda Print™

Bamboo Fiber Printable Fabric

An opaque, canvas-like banner fabric made of natural bamboo fiber with a printable coating, Panda Print™ provides excellent color pop and trims evenly without fraying. It is compatible with dye-based and pigment inks, including: HP5000/HP5500/HPZ6100, Canon 8000/9000, NovaJet Roland, Mimaki and Epson series printers.

Eco-friendly from the beginning

Panda Print™ bamboo fiber printable fabric is made from bamboo, the choice today for eco-friendly products. Bamboo is a hardy, fast growing, easily renewable resource that does not require the use of pesticides or replanting after it is harvested. The bamboo used to make Panda Print™ is grown on an organically farmed plantation and is not harvested from forests.

Panda Print™ is manufactured in an environmentally-responsible, closed loop manufacturing process and has been tested and certified to be free of harmful substances according to REACH compliance standards. Because the printable coating is made primarily of silicone, Panda Print™ is 99.6% biodegradable.

Compatible with many applications, including museum wraps and bamboo banner stands.

Available Sizes

BAMFAB-36059 36" x 59' (914mm x 18m)

BAMFAB-50059 50" x 59' (1270mm x 18m)

Finishing Recommendation:

EnduraCoat Fine Art Coatings
